Лабораторна робота 8

Tema. Основи ASP.NET MVC

Задачі:

- 1. Створити веб-застосунок за допомогою ASP.NET MVC.
- 2. Реалізувати додавання студенту у список, його видалення та редагування. Використовувати валідацію даних при їх введенні.

Опис класів

Student – модель студента;

StudentsController – клас контролер, що відповідає за роботу із класом Student;

Текст програми

Student.cs

```
using System;
using System.ComponentModel.DataAnnotations;

namespace menshakov08.Models
{
    public class Student
    {
        public int Id { get; set; }

        [StringLength(10, MinimumLength = 3 , ErrorMessage = "You've entered wrong fi rst name")]
        public string FirstName { get; set; }

        [StringLength(20, MinimumLength = 2, ErrorMessage = "You've entered wrong last name")]
        public string LastName { get; set; }

        [StringLength(4, ErrorMessage = "You've entered wrong group")]
```

```
public string Group { get; set; }
        [StringLength(20, MinimumLength = 2, ErrorMessage = "You've entered wrong fac
ulty")]
        public string Faculty { get; set; }
        [StringLength(40, MinimumLength = 10, ErrorMessage = "You've entered wrong gr
oup")]
        public string Specialty { get; set; }
        [Range(10, 100)]
        public int AcademicPerformance { get; set; }
        [DataType(DataType.Date)]
        [DisplayFormat(DataFormatString = "{0:dd/MM/yyyy}", ApplyFormatInEditMode = t
rue)]
        public string DateOfBirth { get; set; }
        [DataType(DataType.Date)]
        [DisplayFormat(DataFormatString = "{0:dd/MM/yyyy}", ApplyFormatInEditMode = t
rue)]
        public string DateOfAdmission { get; set; }
    }
```

StudentsController.cs

```
using System;
using System.Collections.Generic;
using System.Data;
using System.Data.Entity;
using System.Linq;
using System.Net;
using System.Web;
using System.Web.Mvc;
using menshakov08.Models;
namespace menshakov08.Controllers
    public class StudentsController : Controller
        private ApplicationDbContext db = new ApplicationDbContext();
        public ActionResult Index()
            return View(db.Students.ToList());
        }
        // GET: Students/Details/5
        public ActionResult Details(int? id)
        {
            if (id == null)
                return new HttpStatusCodeResult(HttpStatusCode.BadRequest);
            var student = db.Students.Find(id);
            if (student == null)
```

```
return HttpNotFound();
            return View(student);
        // GET: Students/Create
       public ActionResult Create()
            return View();
        // POST: Students/Create
        // To protect from overposting attacks, enable the specific properties you wa
        // more details see https://go.microsoft.com/fwlink/?LinkId=317598.
        [HttpPost]
        [ValidateAntiForgeryToken]
       public ActionResult Create([Bind(Include = "Id,FirstName,LastName,Group,Facul
ty, Specialty, Academic Performance, DateOfBirth, DateOfAdmission")] Student student)
            if (ModelState.IsValid)
                db.Students.Add(student);
                db.SaveChanges();
                return RedirectToAction("Index");
            return View(student);
        // GET: Students/Edit/5
       public ActionResult Edit(int? id)
            if (id == null)
                return new HttpStatusCodeResult(HttpStatusCode.BadRequest);
            var student = db.Students.Find(id);
            if (student == null)
                return HttpNotFound();
            return View(student);
        // To protect from overposting attacks, enable the specific properties you wa
        // more details see https://go.microsoft.com/fwlink/?LinkId=317598.
        [HttpPost]
        [ValidateAntiForgeryToken]
       public ActionResult Edit([Bind(Include = "Id,FirstName,LastName,Group,Faculty
,Specialty,AcademicPerformance,DateOfBirth,DateOfAdmission")]    Student student)
            if (ModelState.IsValid)
                db.Entry(student).State = EntityState.Modified;
                db.SaveChanges();
                return RedirectToAction("Index");
            return View(student);
```

```
public ActionResult Delete(int? id)
    if (id == null)
        return new HttpStatusCodeResult(HttpStatusCode.BadRequest);
    var student = db.Students.Find(id);
    if (student == null)
        return HttpNotFound();
    return View(student);
[HttpPost, ActionName("Delete")]
[ValidateAntiForgeryToken]
public ActionResult DeleteConfirmed(int id)
    var student = db.Students.Find(id);
    db.Students.Remove(student);
    db.SaveChanges();
    return RedirectToAction("Index");
protected override void Dispose(bool disposing)
    if (disposing)
        db.Dispose();
    base.Dispose(disposing);
```
